iOS Sprint 5 Bug/ExplorationTesting Report

Signed into app as email: "hullzr@rose-hulman.edu" password: "test1"

1. "My Tasks" button on the leftside drop-down menu doesn't do anything. The home page "My Tasks" button works correctly so I would think it would just be adding the same listener to that drop-down button
2. In the Project Details page, the Tasks Completed field doesn't seem to be updating. Of the 5 tasks in the current project I'm in, 1 of them is complete. It's displaying the correct "complete" flag in the tasks page for the milestone, but in the project details it still says 0/5.
   Task list:

Project Detail page:

NOTE: After working on some other tests and then going back and looking at the Project Details again, it was actually showing the correct 1/5 completed. I guess it was just taking a little bit to pull from Firebase or something. I'll leave this "bug" on the report just in case you think it's something to look into.

3. Milestone Details page goes to just a black screen when clicked. Doesn't crash the app and the navbar at the top still works though.

-->

4. Not exactly a bug. But inside the task details, there's the label "Status" and then it allows you to choose from several different options. I believe that's supposed to be "Category" not status. Status is a different field for a task such as: New, Implementing, Testing, Closed, etc.

Let me know if you guys have any feedback for me or anything; if you like this format for submitting bugs and what-not.
